Comments: **SERVICE REPORT: 06/24/2016**
 {CUSTOMER'S REQUEST/COMPLAINT: Misc repairs.}- {SERVICES RENDERED} Customer brought machine to shop with list of repair he wanted to make. Inspected/tested machine for what it would take to make repairs, looked up and got quote on needed parts, Carl called customer with quote, customer then decided to repair directional switch, brakes, coolant resevoir bodel, replace steering wheel, flush hydraulic oil, change filters, and ordered needed parts. When parts were received, removed master cylinder for service, brakes, and installed new. Found brakes full of water, flushed brake system/bled brakes, found brakes now working, replaced directional switch, and reconnected wiring where it had been cut. Found when testing that relays and servel wiring had been cut, melted mising, and rerouted. Took extensive time trying to get wiring to work. After wiring it was working, and found that forward and reverse valve was not working correctly. Removed and disassembled, found someone had removed one, the centering spring, drove to store and matched up spring. Installed in valve, tested, and found forward and reverse now working. Installed new steering wheel, coolant resevoir, changed filters, engine oil drained, and all the oil from the hydraulic system that I could and refilled with new oil, due to wter being in hydraulic system. Tested machine and found working correctly.
