

RAKE - N - ATOR

The Rake-N-Ator turns your skid steer loader into a landscaping and land-leveling machine. The rake is designed with five grading bars, which contain a total of 80 teeth. The 2" long tooth design quickly loosens and flattens your landscaping area. The applications for this rake are only limited by your imagination.

The rake works with the same basic principles as an ordinary garden rake. As the rake is pushed or pulled across the ground, it filters the dirt through the teeth and over the bars to break up large chunks of dirt. It also redistributes material by removing high spots and filling low areas.

The patented Rake-N-Ator uses no moving parts that might slow you down. The teeth are, however, removable for easy replacement as they wear.

BEFORE

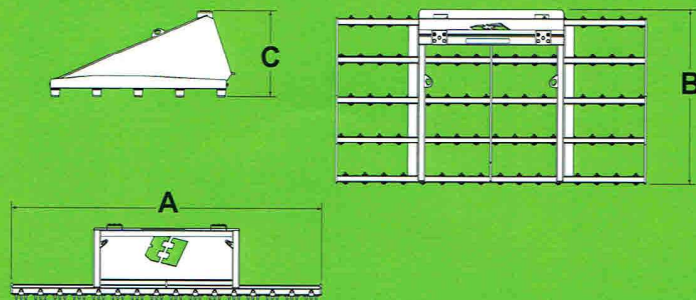

AFTER

Uses

- Spread and level soil and gravel
- Prepare smooth, uniform seed beds for residential or commercial lawns
- Sift and pulverize large chunks of dirt
- Consolidate unwanted trash such as roots, rocks, weeds, or a variety of other types of construction materials into a common area
- Level and smooth pulling tracks or horse arenas
