## CORRECTION:

Looked over. Checked hydraulic pressures and checked charge pressure--very low. Drained some oil out of the tank and found a lot of metal in the tank. Removed all the motors and the pumps and sent them out to be rebuilt. After receiving the pumps and the motors, reinstalled them then cleaned out all the main lines. Cleaned the hydraulic tank out. Filled with oil and primed the pumps before starting. Ran the machine to check for leaks and then tested the machine. Also drained the engine oil and changed the filters.

## ADDITIONAL DESCRIPTION:

hyd leak  
unit is creeping  
forward reverse switch is kicking out  
cutter head motor speed slowing down  
service  
check crank seal
