WORK DESCRIPTION :

Shop: Engine locked up

Contact:

CORRECTION:

Removed all injectors and poured atf/vinegar mixture into cylinder to attempt to free pistons. Let mixture soak for 48 hours and attempted to turn crank. Internals are still stuck fast and will not move. Suggest engine replacement. After seized engine was removed the engine bay was cleaned of heavy amounts of debris. During this time the hydraulic tubes for the loader lift arms were found to be damaged from debris entering through the bottom of machine. These were replaced before new engine was installed. After new engine was installed the equipment had a no start condition due to a faulty starter. Replaced starter and the equipment had no further issues starting. While testing the operation an overheating problem was found. Found that the fan blades were out of adjustment. Now equipment operates normally and no codes. Hydraulic oil, filter, and coolant replaced. Couplers for attachments were frozen. Freed up and cleaned pins to ensure they operate normally.
