INTERNAL-1680 BOND POLICY SHOP				

Removed the engine from the machine. Pulled the engine apart. Removed the oil pan from the unit. Removed the valve cover and rocker arm assembly from the engine. Removed the cylinder head. Removed the pistons from the unit. Installed new pistons and bearings in the unit. Installed the cylinder head back on the engine. Installed the rocker arms and push tubes back in place. Installed the oil pan on the unit. Assembled the rest of the engine. Installed the engine in the machine. The engine ran for approximately 2 hours and lock up. Removed the engine from the unit, pulled the head off and found #3 piston was welded to the liner.

We installed the parts from the engine out of the machine to a reman long block to get the customers machine up and going so he could get back in the field to harvest his crops. It was more efficient than rebuilding the engine again.

Spent \$14,656.⁰⁰
on Reman Engine
Less than 548 hours
