Complaint: Unit got hit by a skid steer on job site

Cause: Inspect truck for damage Type: Unscheduled repair

Labor Correction:

Chassis / Cab / Inspected the front suspension and measured the steer axle placement. Nothing looks to have moved. The hood has moved back approximately 1/4". This is allowing the door on the passenger side to hit the hood when the door is opened and closed. The hood was adjusted several times to try to get the clearance better. Due to the bushings on the hood pivot point being pretty much gone the proper adjustment could not be obtained. The bushings will need to be replaced to get the hood to adjust correctly.

All of the fluids were checked. The engine oil was right at two gallons low. It was topped off. All of the brakes were adjusted as they were a ways out of spec. The clevis pin on the left rear drive axle was coming out as the cotter pin is missing. The pin was reinstalled and a new cotter pin installed. ADVISED THE DRIVER TO NOT OPEN THE PASSENGER DOOR UNTIL THE HOOD PIN BUSHINGS CAN BE REPLACED.

Complaint: Repair Transmission Leak

Cause: Fitting for pto came loose Type: Unscheduled repair

Labor Correction:

Transmission / PTO / I spent an hour washing the truck pulled into the bay had lester engage the pto and found a fitting leaking. Tightened the fitting and verified repair. Topped off oil and returned the truck to service note the driver needs to check oil level in the morning. Also theres added time on this OP for helping lester with the paccar software on truck 52 and checked a coolant leak on truck 45. Washed truck after repair and cleaned bay
