SERVICE REQUEST:

DIAGNOSIS:

SERVICE PERFORMED: Drained hydraulics and found filter plugged with metal(fine material). Called customer and explained that need to disassemble tractor to see where metal is coming from. Drained coolant and disconnected linkages, electrical, hydraulic lines and heater hoses to remove cab. Removed cab. Removed brake lines, lube manifold and removed clutch brake cover on transmission, found metal but no obvious problem. Removed draft arms, hydraulic lines, electrical and rock shaft. Did not find where metal is coming from there either. Installed splitting stand and split at clutch housing, disassembled C1 and C2, removed transmission pump and input planetary, disassembled Hi-Lo, did not find where metal is coming from there either. Split again at transmission case and disassembled and checked PTO brake not coming from there either. Removed C3 manifold and removed shaft removed brake assembly, disassembled and did not find where metal is coming from there either. Reassembled housings and supported rear of tractor, removed axle housings and found that left brake backing plate is worn real bad, this is where metal is coming from. Removed differential and disassembled. Removed PTO shaft and drive gear. Removed drive pinion shaft. Made quote for all bearings, seals, packings, o-rings, gaskets and discs(metal embedded in disc material), hard parts to be replaced are drive gear(Tow), left axle pinion(Stub shaft), separator plates in differential, pinions in differential(spider gears), arm(clutch arm internal in clutch valve), arm(clutch external on clutch valve), transmission pump, shafts(for gears in output planetary), hub(input planetary), plate(input planetary). Made quote and turned in. Disassembled both axle housings, removed bearings and seals. Cleaned housings and shafts, replaced bearings, cups and seals, rebuilt planetaries and installed, set shim packs and torqued to specs. Removed rear differential housing, pressure washed and cleaned out with solvent. Removed clutch housing, pressure washed and cleaned out with solvent. Cleaned C1 and C2 with solvent, assembled clutched and installed on flywheel. Cleaned and assembled Hi-Lo and input planetary. Cleaned and assembled B1 thru B4 and C3 assembly and checked operation with air. Cleaned and assembled differential. Installed new bearings and cups for drive pinion and installed setup per instructions. Installed differential with new bearings and setup per instructions. Installed lube tray and tube, installed differential lock line inside housing. Installed new brake pads on backing plate and brake pistons. Installed clutch housing and differential housing to installed final drives. Installed final drives on differential housing and split at differential housing and clutch housing. Installed brake assembly with new o-rings, checked operation of brake assembly through shift valve ports. Installed shaft and C3 manifold and set shims per instructions. Cleaned and assembled PTO brake and installed in clutch housing. Installed gasket between differential housing and clutch housing and attached clutch housing to differential housing. Installed drive hub and input planetary, installed Hi-Lo assembly and torqued to specs. Installed bearing quill and shimmed to specs. Disassembled clutch valve and found valves and housing are scoured, disassembled shift valve assemble and found the same. Called customer with added parts list and quote for these items. Ordered parts. Assembled clutch valve and installed, installed transmission pump. Installed PTO shaft and drive gear, shimmed to instructions. Installed new gasket between engine and clutch housing and pushed back together. Installed transmission cover, brake lines and differential lock line. Assembled shift valve and installed. Charged accumulators and installed. Installed lines to C1 and C2. Installed new gasket for rock shaft and installed, replaced dipstick tube in rock shaft housing. Ran lines and electrical over rock shaft housing. Installed cab and connected all electrical, hydraulic and heater hoses. Connected linkages for rock shaft and SCVs. Filled with coolant and new Hy-Gard. Replaced hydraulic and transmission filters. Started tractor and topped off fluids. went to move tractor and tractor will not move. Removed filters and found them plugged with metal, replaced filters and replaced hydraulic oil. Started tractor and tractor still will not move. Connected gauges to shift valve to check pressures. Found no pressures on C2, B2 or B4. Diagnostic on issue and problem is corrected and rechecked pressures.

COMPLAINT:

04 SERVICE REQUEST: HYDRAULIC ISSUE'S ON THE HIGH PRESSURE SIDE AFTER TRANSMISSION REPAIRS. CLEAN FINE METAL OUT OF THE SYSTEM SO THE HYDRAULICS WOULD FUNCTION.

CORRECTION:

SERVICE REQUEST:

DIAGNOSIS:

SERVICE QUOTE:

SERVICE PERFORMED: AFTER PUTTING TRACTOR BACK TOGETHER NOTICED THAT HYDRAULIC PUMP WAS WEAK AND NOT MAKING PRESSURE. CHANGED FILTERS SEVERAL TIMES. TRIED DE STROKING PUMP THAT DID NOT HELP. PUMP WAS FULL OF METAL SHAVINGS FROM THE BRAKE FAILURE. CLEANED IT OUT BEST I COULD. BOB AND I NOTICED THAT HYDRAULIC PUMP WOULD MAKE A INCREASE IN PRESSURE THEN DUMP BACK AND DROP OFF. UNIT WAS LOOSING OIL SOME WHERE. WE CHECKED THE PRESSURE CONTROL VALVE AND IT WAS PLUGGED UP WITH METAL AND NOT ABLE TO FREELY MOVE LIKE IT WAS SUPPOSED TO. CLEANED THAT OUT AND RE INSTALLED IT ONTO TRACTOR. OPERATED TRACTOR AND FOUND THAT NUMBER ONE SCV WAS HOT TO THE TOUCH. REMOVED SCV FROM TRACTOR. REMOVED END CAP AND PULLED VALVES. THE VALVES WERE TORN UP AND CUT UP. INSPECTED VALVE SEATS TO CHECK FOR DAMAGE. THEY WERE ALSO CHEWED UP. GROUND DOWN VALVE SEATS AND REPLACED OLD VALVES WITH NEW VALVES. FLUSHED OUT SCVS BEST I COULD. REINSTALLED SCV AND AN CHECKED FUNCTIONS OF IT. PRESSURES WERE NORMAL. THEN HAD TO GO BACK AND TIGHTEN A LINE THAT I LEFT LOOSE UNDER THE CAB. STARTED TRACTOR BACK AND CHECKED FOR LEAKS. FOUND NO LEAK.
