### Job 1 PERFORM STAGE 2 XPRESS CHECK

Brought truck in shop and began diagnosing engine noise, connected insite and checked fault codes, have all active codes for aftertreatment system which has been cut off, got stethoscope and operated engine at 1200rpm, listened to engine and noise sounds like it is coming from top end, removed air filter, EGR cross over pipe and valve cover, found camshaft is flaking, rollers on 2 intake rockers are damaged as well as 1 exhaust rocker is damaged, this engine has recently had the oil changed as well as filter replaced. Will need to cut open oil filter and inspect for metal, even if no metal is found will still need to drop the oil pan, inspect rod and main bearings for damage, if damage is found oil cooler will need to be replaced. Reinstalled valve cover and EGR cross over pipe, began inspection for oil leaks, found that the front gear housing is leaking, also found upper gear cover strip seal and front crank seal are leaking. Ran out of time at this point, will need more diag time to inspect/put together a parts quote for customer approval.
