-----> Description Of Repair Job A <-----

COOLANT LEAK - HAVING TO ADD 2 GALLONS A DAY WHILE RUNNING MACHINE

-----> Solution Of Repair Job A <-----

Customer complains that have to add coolant. Pressure checked cooling system and did not find any external leaks. With pressure gauge connected to cooling system and engine running system would build high pressure in a very short time which indicates a compression leak into cooling system. Removed engine head and found crack in cylinder head. Installed new cylinder head and exhaust pipe, changed engine oil and air filters, test run machine and no other problems found.

8 quarts engine oil

Machine would set code when starting, found code 12-22 right thumb switch out of range. Raised cab and found rodent chewed through wiring to right handle. Repaired wiring to right handle, everything working as should.
