Remove, Recondition Before Failure & Install - Engine

Customer complaint:

customer wanted an overhaul

Resultant damage:

Cause of failure:

Repair process comments:

removed radiator, air to air, and condenser. then removed the engine. disassembled the engine. took the block to the machine shop where the block was decked to cat spec. began the overhaul with checking the crank and making sure it was ok. installed new bearings for the crank. installed front gear train with new bushings in the gears. installed front housing with all new gaskets. installed rear housing with new bolts. got the flywheel resurfaced. resealed fuel filter housing and installed new supply and return lines to the cylinder head and the return line for fuel. installed new liners and pistons with new bearings. installed reman head with new bolts. installed reman injectors and replaced the bolts for the overhead. adjusted intake, intake actuators, exhaust valves and jake brakes to cat spec. installed new water pump and resealed oil cooler housing. installed reman oil cooler, and new reman water pump. checked the pre cooler and it was fine. installed reman turbos and resealed the oil supply tubes and return tubes. installed new front and rear motor mounts, and new radiator mounts. after the overhaul was complete flushed out the cooling system and put in new green coolant
