-----> Description Of Repair Job A <-----

RUNNING ISSUE

-----> Solution Of Repair Job A <-----

it came in with engine codes causing it to run bad after looking into the codes and diagnosing the issue I found that the throttle body its self was bad so I ordered a new one in and put a new throttle body on. After replacing the part I set it outside and let it run for a couple of hrs to make sure it was running properly and the engine was running right.

I tightend the alternator belt because it was really loose and squealed really bad everytime you would start it.
