COMPLAINT:

CHECK OUT COOLANT LEAK

CAUSE:

- Plastic was on sealing edge of cooler.

CORRECTION:

- Arrived at machine and found the lower radiator hose was leaking. Found hose clamp was loose. Tightened clamp and topped off coolant. Hooked up laptop to check and clear any codes. Ran the machine to make sure there were no other coolant leaks. Cleaned up work site. Returned to machine hose had worked its way off the cooler. Drained down the coolant to figure out what was going on. Found plastic pieces on the sealing edge causing the hose to back off. Cleaned up the sealing edge and tightened clamps. Filled with coolant.

COMPLAINT:

CHECK A/C

CAUSE:

- Failed blower motor switch.

CORRECTION:

- Hooked up gauges to check pressures. Found that the compressor wasn't working. Disassembled the dash to check out the blower switch. Found the blower switch was bad. Had to re-wire blower switch to get it to work. Ran machine and checked pressures and A/C was now working and cooling properly.

COMPLAINT:

CHECK OUT BATTERIES DEAD. CHECK DRAW

CAUSE:

Alternator was hooked up wrong causing them to burn out diode and also causing power to back feed causing starter to stay engage causing starter to burn up.

CORRECTION:

Customer had installed new alternator. Alternator wasn't charging and found it had been hooked up wrong. Starter was also staying engaged and wouldn't work all the time. Ordered parts. Installed new alternator, start relay, and new starter. Ran machine and battery was charging as it should, but starter was still staying engaged when running. Cut into harness and found a diode there. Found that the diode was burnt from the alternator being hooked up incorrectly. Installed new diode and everything functioned as it should.
