Complaint: Machine falls on its face

Cause: bad pilot pump, turbo failure, hole in air cooler

Correction: I drove to machine location and checked over machine. I checked over fuel system and cleaned up. I then tested hydraulic pressures and found pilot pressure sporadic. I then called and had pump ordered. I then drove to next job. Once pump arrived I returned and installed. Pressures are in spec machine still bogs. I checked air cleaner and turbo I found chunks missing on turbine wheel. I called and had ordered I then drove to next job. Once turbo arrived I returned installed and ran machine. Customer had me look at leaks and I found pin hole in air cooler. I then tightened several hoses. Oil pan is also smashed. Customer wants replaced at this time. I drove to next job. Once parts arrived I returned and installed. I then filled engine oil and changed filter. I then operated machine for half an hour and everything checks out fine. Machine is good to return to service.
