COMPLAINT:

Remove front axle to disassemble.

CAUSE:

Metal in the system

CORRECTION:

Drained final drives. Locked out the machine. Jacked up the machine and put it on blocks. Pulled the tires. Dropped the axle assembly onto cart. Power washed axle. Disassembled both final drives and axle housings to inspect for metal. Metal shavings found, but no failure point. Removed the input housing on the front of the differential to inspect for metal. Found the differential lock diaphragm cover bolts have backed out, contacted the differential housing, and sheared. Center section is ruined. Customer chose to replace with a re-man instead of rebuild.

Re-assembled the core axle housings, input, and final drives for transport and mounted on the pallet provided with the new axle. Swapped parts between axles and put the new axle on the axle cart. Filled the axle with Hygard. Installed the axle in the truck and attached all oil lines. Installed left front fender. Installed both tires and torqued the lug bolts. Ran truck and checked fluid level after letting set for 30 minutes as specified in manual. Greased the truck.
