**//WAR-10 Warranty**

After replacing temp sensor and getting skid steer to regen, it was running very rough. I first checked the fuel pickup tube in tank and made sure it was not blocked off by debris. I checked the fuel filter to make sure it wasn't full of sediment. I removed the big fan shield off the back of machine and checked all of the intake boots and hoses. I then performed a cylinder cut out test and found cylinder number two was not firing at all. Installed new injectors and calibrated them. Did the cylinder cut out test and had no issues. Machine runs good now.

DTAC Solution: NA                      CCMS Case: NA

Failure Part: MIU804361 x4

Failure Mode: lack of power

Failure Area: engine

Downtime: 2 days

Diagnostic time: 5 hr

**COMPLAINT:**

Oil in harness.                      Emissions wty

**CAUSE:**

Oil in harness from failed injectors.

**CORRECTION:**

While replacing injectors I removed the injector harness and found oil inside the connector. I then replaced injector harness.

Failure Part: MIU804361

Failure Mode: LEAKED

Failure Area: ENGINE
