Customer Service Issue # 1

Com: Line 1 - Low Power

Cause:

Fix: Test drove, low on power, boost was low, checked for leaks in CAC, no leaks found, checked turbo actuator & exhaust back pressure valve, EBP valve was ok, waste gate didn't move, found air control valve leaking & not supplying air, replace air control valve. Test drive truck ran good. Truck came back again for low power and check engine light. Checked EGR valve, it has failed test and would not go completely closed. Replace EGR vavle. Remove seat, pull carpet back, remove dog house, drain coolant, pull pipes from back of EGR vavle, bottom pipe would not come off at manifold, left it attached. Upper pipe bolts at manifold would not come out, had to cut old bolts off to remove, remove rear coolant manifold for access, replace EGR valve, reassemble removed components. Vac fill radiator, test drive to verify repair.
