Labor- Shop	Troubleshoot engine issue. Batteries would not charge to start truck. Replaced batteries and added coolant. Started truck and pulled into wash bay. Washed engine that was covered in oil. Started engine to check for leaks but it was leaking out so much blowby that we couldn't run it for long. Pulled into shop for disassembly. Disassembled engine and found that head bolt had broken causing damage to head and head gasket. Disassembled completely for inframe, inspected cam, rockers, crank, ect. Cleaned block and welded out broken bolt in cylinder block. Spent a ton of time cleaning oil ports and inside of cylinder block because there was so much water in the oil and oil in the water, the system was very very bad. After startup, test drove truck and then changed oil again on engine because of water entry. Assembled with new o/h kit, oil pump, cylinder head, oil pump relief valve, rod/main bearings, thrust plates, head bolts, exhaust bolts, intake bolts, gaskets, seals, ect. Had counterbore cut and shimmed liners to spec. Flushed oil out of aftercooler and cleaned radiator. Filled with new oil and antifreeze. Started engine and found turbo pushing oil. Replaced turbo.	64
